Datastage Scenario Based Question/Answer : 2

Datastage Scenario Based Question/Answer : 2

Without a key column, Pivoting the Output data in Required Format.

Input Data :

```

AME
-----
IBM
/EBSPHERE
DATASTAGE
IBM
INFOSPHERE
DATASTAGE

```

 Required Output
 NAME

```

IBM WEBSHERE DATASTAGE
IBM INFOSPHERE DATASTAGE

```

 Solution:
 =====

One of the way to solve this problem is :

Source=> Transformer=> Pivot Enterprise stage (Horizontal)/Transformer=> Target

1. Read the Source Data.
2. Col1=> SeqNo =>
Derivation (If @INROWNUM <=3 then 1 Else (Floor((@INROWNUM - 1) /3) + 1))
3. Col2=> Name
4. You will get data like this

```

SeqNo | Name
1| IBM
1| WEBSHERE
1| DATASTAGE
2| IBM
2| INFOSPHERE
2| DATASTAGE

```

5. Then use Vertical pivoting using Pivot Enterprise stage. Pivot the data based on SeqNo column. Or you can use Transformer Looping concept as well.

6. Pass the data to target.

You will get the output in required format.
